

Welcome to the ultimate in kayak versatility and performance!

Squall Sailrig Kits are available for the Lightspeed Phoenix 175, Quantum 191 and Phantom 225 (tandem) models, our new Evolution 1610, and adaptable to many other manufacturers models. These are the highest performance sailrigs for kayaks on the market today. Starting with one of our kayaks (the ONLY kayak built with a balanced foil rudder necessary for efficient handling under sail) the speed, comfort and ease of use are unsurpassed.

Our outriggers aren't toy-like in proportion. Each outrigger has 250 lbs of flotation, and is set 6' from the centreline of the hull. This provides 1500 lbs of righting leverage to keep the main hull solidly on its feet. It also provides the sails with LOTS to push against, and translates into head snapping acceleration in gusts.

All other sail kits for kayaks, even those LOOKING LIKE high performance, high pointing sails are cut to be far better reaching or off the wind. Our entire setup is designed to go fast and point high, while still allowing stellar off-wind performance!

The entire assembly goes together and apart in under 5 minutes and is very user-friendly.

Reefing and lowering sails on our rigs is the easiest and safest in the industry. Other rigs require cumbersome zipper reefing. That means dumping the sails in your lap, zipping in high winds (also think: sand) and likely even dragging sails overboard. Our sails jiffy-reef and stay overhead, on the boom even when you lower the sails completely. When they are down and velcroed onto the boom, Squall Sailrig-equipped boats are as easy and fast to paddle as the original model - all the while leaving the mast in place. No deck clutter, no takedown and storage necessary. These have been tested and used safely in winds in excess of 30 knots - weather most paddlers would not sensibly venture into!

We prefer to build in a daggerboard box for the ultimate in performance, but centreboard and leeboard versions are available.

The joy of sailing at 3-4 times paddling speed to your destination is only the beginning. Beach your Squall and within minutes you can have the outriggers off, leaving you with your high performance Evolution, Phoenix, Quantum or Phantom to play, surf or just wander the shoreline, fulfilling your need to explore.

The Phantom (tandem) Squall comes standard with a cat ketch sailrig for ease of handling, while all singles use a cat rig (single mast/sail).
